

Git Sync Verification Report

Repository: https://github.com/manasijkanjilal-hub/nucleus-ai
Branch: master
User: manasijkanjilal-hub
Verified: 2026-06-12

✓ Summary

The repository is **fully synced** with GitHub. All code from Phases 1, 2, 3A, and 3B is committed and pushed. The working tree is clean with no uncommitted, untracked, or deleted files.

Check	Result
Working tree clean	✓ Yes (nothing to commit)
Local HEAD == remote master	✓ Yes (826ef11)
Branch ahead/behind remote	✓ Even (0 ahead, 0 behind)
Key directories present	✓ All present
Key files present	✓ All present
Migrations present	✓ Yes
Env examples present	✓ Yes

Commit Information

- **Latest commit hash:** 826ef11a1d9095f883f37642f4e38dff792e91e3
- **Short hash:** 826ef11
- **Subject:** feat: notification system – in-app + email (Phase 3B)
- **Author:** manasijkanjilal-hub
- **Date:** 2026-06-12 07:31:46 +0000
- **Remote HEAD (git ls-remote):** 826ef11a1d9095f883f37642f4e38dff792e91e3 — **matches local HEAD**
- **Total commits on master :** 18
- **Total tracked files in repo:** 249

Note: This task expected to stage/commit pending changes, but all Phase 1–3B work had **already been committed and pushed** in prior steps. The local origin/master tracking ref was stale (showed “ahead by 9”); a git fetch confirmed the remote already contained every commit. No new commit was needed — the diff between local HEAD and remote master is empty.

Files in the most recent commit (Phase 3B — Notifications)

18 files changed, 1,144 insertions(+), 2 deletions(-):

- frontend/prisma/schema.prisma (NotificationType enum, metadata, emailNotifications)
- frontend/src/lib/notifications.ts , frontend/src/lib/email-service.ts
- frontend/src/app/api/notifications/route.ts (+ [id]/read , read-all , preferences)
- frontend/src/app/api/admin/announcements/route.ts
- frontend/src/components/NotificationCenter.tsx
- frontend/src/app/notifications/{page,layout}.tsx
- frontend/src/app/settings/notifications/page.tsx , frontend/src/app/admin/settings/page.tsx
- Flow integrations in signup/route.ts , generate/route.ts , header & settings/admin nav

Phase Coverage (all committed & pushed)

Phase	Description	Commit(s)
1	SaaS Foundation — Auth, RBAC, Admin Panel, Security, DB schema	0175f62 , 94e7d07 , 4b9a439
2	Core Features — Context Vault, AI Generation, Campaigns, Analytics	3478a45 , 842d062 , 96fe58a
3A	Billing & Subscriptions — Stripe integration, usage limits	e55fe98
3B	Notifications — in-app + email system	826ef11

Key Directories Verified Present

Directory	Tracked files
frontend/src/app/admin/	6
frontend/src/app/billing/	3
frontend/src/app/notifications/	2
frontend/src/app/context-vault/	2
frontend/src/app/campaign-generator/	2

Key Files Verified Present

- ✓ frontend/src/lib/stripe-service.ts
- ✓ frontend/src/lib/email-service.ts
- ✓ frontend/src/lib/notifications.ts
- ✓ frontend/prisma/schema.prisma
- ✓ frontend/src/app/settings/notifications/page.tsx
- ✓ frontend/src/app/admin/settings/page.tsx
- ✓ frontend/src/app/api/admin/announcements/route.ts
- ✓ frontend/src/app/api/notifications/route.ts
- ✓ frontend/src/app/api/notifications/[id]/read/route.ts
- ✓ frontend/src/app/api/notifications/preferences/route.ts
- ✓ frontend/src/app/api/notifications/read-all/route.ts

Supporting Files Verified Present

Documentation / reports

- ✓ README.md , ENV_SETUP.md
- ✓ PHASE1_AUDIT_REPORT.md , PHASE1_COMPLETION_REPORT.md , PHASE2_COMPLETION_REPORT.md
- ✓ docs/deployment/ (aws, gcp, azure, digitalocean, self-hosted, monitoring, README)

Environment examples

- ✓ .env.production.example
- ✓ backend/.env.example , backend/.env.production.example
- ✓ frontend/.env.local.example , frontend/.env.production.example

Database migrations (Prisma)

- ✓ frontend/prisma/migrations/0_init/migration.sql
- ✓ frontend/prisma/migrations/20260603062639_phase1_rbac_overhaul/migration.sql
- ✓ frontend/prisma/migrations/migration_lock.toml

Remote Sync Confirmation

```
$ git ls-remote origin refs/heads/master
826ef11a1d9095f883f37642f4e38dff792e91e3    refs/heads/master

$ git status -sb
## master...origin/master    (0 ahead, 0 behind – even)

$ git diff --stat HEAD <remote-head>
(empty – local and remote are identical)
```

Issues / Observations

1. **No new changes to commit** — all Phase 1–3B work was already committed and pushed before this verification ran. This is expected and not an error.

2. **Stale tracking ref** — local `git status` initially reported “ahead by 9 commits” due to an out-of-date `origin/master` tracking reference. Resolved with `git fetch`; the remote already had all commits.
 3. **Phase 3A / 3B completion reports** — dedicated `PHASE3A_*` / `PHASE3B_*` markdown reports do **not** exist in the repo (only Phase 1 & Phase 2 completion reports were authored). The Phase 3A/3B code is fully present and pushed; only the narrative report docs are absent. Create them later if desired — this is a documentation gap, not a code/sync gap.
 4. **GitHub App permissions** — pushing succeeded. If any private-repo access issues arise in future, ensure the [Abacus.AI GitHub App](https://github.com/apps/abacusai/installations/select_target) (https://github.com/apps/abacusai/installations/select_target) has access to this repository.
-

Conclusion

The repository is fully synced. Local `master` and remote `origin/master` both point to commit `826ef11`. All key directories, source files, API routes, components, pages, env examples, migrations, and documentation are committed and present on GitHub. No code is missing.
