

Nucleus AI — Login Credentials & Setup

Default Login Credentials

The database has been seeded with the following test accounts:

Role	Email	Password
Admin	admin@nucleus-ai.com	admin123
Demo User	demo@nucleus-ai.com	demo1234

 **Security Warning:** Change these passwords immediately in any production or publicly-accessible environment.

Quick Start — First Login

1. **Start the application** (if not already running):

```
bash
cd /home/ubuntu/nucleus-ai/frontend
npm run dev
```

2. **Open the login page** in your browser:

```
http://localhost:3000/login
```

3. **Enter credentials:**

- Email: admin@nucleus-ai.com
- Password: admin123

Database Setup & Seeding

Prerequisites

- PostgreSQL running (via Docker Compose or external)
- DATABASE_URL configured in frontend/.env or frontend/.env.local

Push Schema to Database

```
cd frontend
npx prisma db push
```

Seed the Database (create default users)

```
cd frontend
npx prisma db seed
```

Or run directly:

```
cd frontend
npx tsx --require dotenv/config scripts/seed.ts
```

The seed script is **idempotent** — running it multiple times will not create duplicate users.

Run Migrations (production)

```
cd frontend
npx prisma migrate deploy
```

Creating New Users

Option 1 — Sign-up Page

Navigate to `http://localhost:3000/signup` and fill in the registration form.

Option 2 — Prisma Studio (GUI)

```
cd frontend
npx prisma studio
```

This opens a web UI at `http://localhost:5555` where you can browse and edit database records.

Option 3 — Script / CLI

```
cd frontend
npx tsx -e "
const { PrismaClient } = require('@prisma/client');
const bcrypt = require('bcryptjs');
const prisma = new PrismaClient();
(async () => {
  const hash = await bcrypt.hash('YOUR_PASSWORD', 12);
  const user = await prisma.user.create({
    data: { name: 'New User', email: 'user@example.com', password: hash }
  });
  console.log('Created:', user.email);
  await prisma.$disconnect();
})();
"
```

Changing a Password

There is currently no password-change UI. Use one of these methods:

Prisma Studio

```
cd frontend
npx prisma studio
```

Find the user, update the `password` field with a new bcrypt hash.

CLI

```
cd frontend
node -e "
const bcrypt = require('bcryptjs');
bcrypt.hash('NEW_PASSWORD', 12).then(h => console.log(h));
"
```

Then update via Prisma Studio or a database client.

Authentication Details

Component	Technology
Auth Library	NextAuth.js v4
Strategy	JWT (Credentials)
Password Hash	bcryptjs (12 rounds)
Session	JWT stored in cookie
Login Page	<code>/login</code>
Signup Page	<code>/signup</code>

Troubleshooting

Issue	Solution
“Invalid credentials”	Verify the seed script ran successfully. Re-run <code>npx prisma db seed</code> .
Database connection error	Check <code>DATABASE_URL</code> in <code>frontend/.env</code> . Ensure PostgreSQL is running.
Schema out of sync	Run <code>npx prisma db push</code> to sync schema.
Forgot password	Use Prisma Studio or the CLI method above to reset.
Seed script fails	Ensure dependencies are installed: <code>npm install --legacy-peer-deps</code> in <code>frontend/</code> .
